

INTRODUCING TOTAL DATA SECURITY

ABOUT US

D.Day Labs helps protect and manage valuable data assets through discovering their sensitive data patterns.

In an unsafe world, we increase our clients' resilience to cyber-threats and data theft.

KEY FEATURES

- ✓ Automated protection against data breaches
- ✓ Maps and manages sensitive data assets
- ✓ Operates in the cloud and on user devices

How It Works

Data Mapping

Locate sensitive data with heat-map visualizations and instantly assess risk of data leak.

Document Protection

If the document contains sensitive information it moves to a secured centralized vault which manages access rights.

Breach Prevention

The vault continuously detects any access anomalies which are subsequently reported to the IT security officer.
